

Results of the first month of my internship

### Overview

- O1 Introduction Phase:
  Organisational steps and first impressions
- O2 Making the Tool-Chain Multilingual:
  Adjusting the existing project to fit into a multilingual context
- Make the Proxy Navigation Multilingual:
  Adjust the Navigation to fit into the previously created multilingual fields

Setting up the new environment (downloading and adjusting needed software)

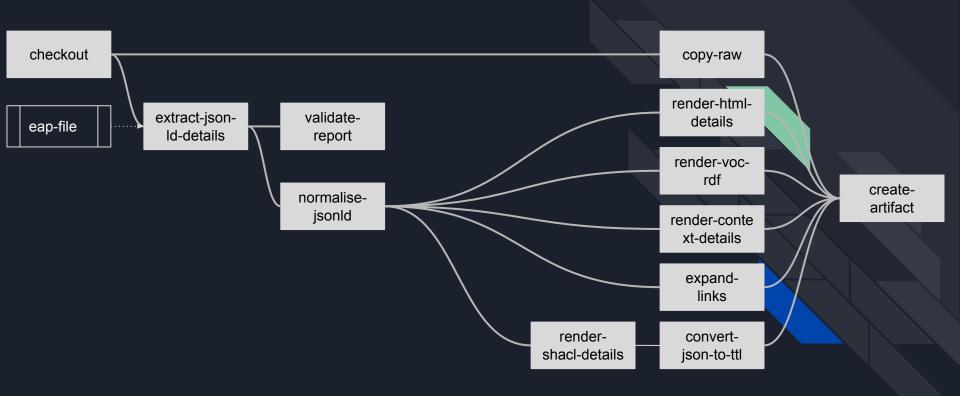

Getting used to the new environment

Researching the used technologies/softwares

Granting access to all needed areas such as project repositories

Reading into the projects

# Making the Tool-Chain Multilingual: Before

## Tool-Chain: Repositories

#### Duet:

Configuration Data for the Circle CI

## Duetworkspace:

Stores Data that is used in the Circle Ci and their configuration

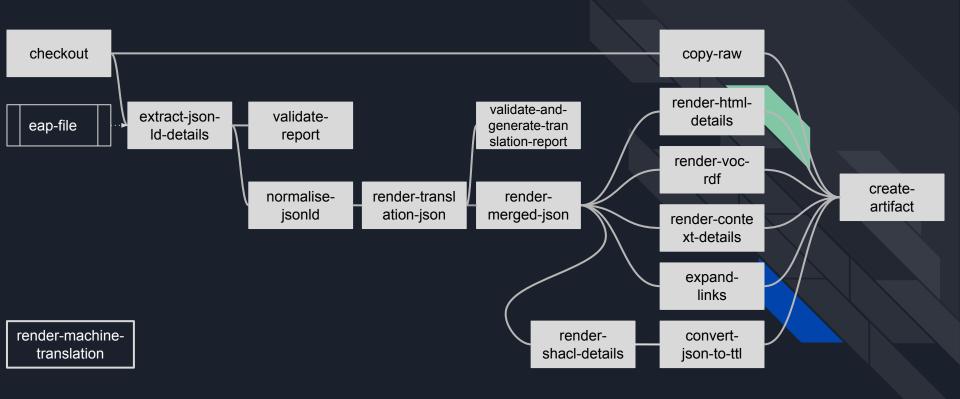

#### **Duet-Generated:**

Stores the results

OSLO-Specification-Generator:

Has all the js files needed for the circle ci steps

# Making the Tool-Chain Multilingual: After

# Demo

# Make the Proxy Navigation Multilingual

Original navigation did not consider the new multilingual files

#### Caused errors such as:

URLs do not represent a multilingual context Points to files that no longer exist Location of files changed ...

#### Adjustments made:

Created multilingual URLs and allow them

Base URLs can be specified by site owner to allow base links in certain languages

File pointed to is always according to the Browser's prefered language (if possible)

e.g. a dutch page with English as prefered language:

http://landingpage\_endpoint/doc/applicatieprofiel/adres/index\_en.html

Point to the right files according to Browser's preferred language (currently working on HTML)

Adjust UNIT tests to fit the new wished behavior
